

## Enabler Alarm

### **BJ-214 (Also: BJ-214-UK/AU/US)**

Trigger an alarm for your family anywhere in the house

Enabler alarm is a "**Plug and Play**" device that allows you to **send out a warning signal** using any of [our controllers](#) or the **switch** that best suits your needs. A family member or caregiver will receive an acoustic warning signal when you activate the alarm.

The **radio frequency system** allows a family member or caregiver to take the Enabler to any room with an available socket.

Connect **up to 4 different Enablers** in different rooms and activate them all at once or just the one that you choose.

This device is part of our [environmental control](#) solution.
