

Enabler Phone

BJ-231

Make phone calls with a hands-free phone

Enabler Phone allows you to **control a hands-free phone remotely** by using [our controllers](#) or locally using your favourite **switch**. You can make calls with the speed dial function or digit dialing, as well as answer and hang up in an autonomous way. Speak with whoever you want as much as you want!

Enabler Phone is based on two elements: a **phone** with a hands-free speaker and the **Enabler** which allows wireless control.

This device is part of our [environmental control](#) solution.

- Supply voltage: 230 VAC.
- Controllable with our remotes.
- Two switch inputs for 3.5 mm mono jack plug (female).
- Size: 220 x 190 x 50 mm.
- Radio Frequency 433 MHz.
- Part of our environmental control solution.
- Plug and play. No installation needed.
- 10 codes of direct dial to stored numbers.
- Digit by digit dialing also possible.
- A switch input to answer and hang up calls.
- A switch input to place a direct call to a memorised number.
- To control a second phone in the same system ask for the reference BJ-231B.

Compatible with switch.

Please ask us if you want to have your own hands-free phone adapted.
