

Enabler 9R

BJ-237

9 relay outputs for the control of lifts, buttons or other systems

Enabler 9R is a device with 9 switched relay contacts, specially designed to **control elements with multiple functions**, such as lifts, ceiling hoists, special motored beds and elements of a multisensory room like bubble tubes, lights, fiber optics, etc. It can be also used as a gateway between our remotes and other home automation protocols like KNX. It is powered with **low voltage** .

This receiver can be **activated remotely using any of** our controllers.

Connect up to 4 different Enabler 9R in your environment to control **4 elements with up to 9 different functions each**, or more elements with different functions.

This device is part of our environmental control solution.

- You can activate it remotely with any of our controllers.
- Controls up to 9 different functions of the same device.
- Possibility of personalized programmeming according to your needs.
- Radiofrequency system that overcomes walls and obstacles.
- Technical features:

- Power supply: 12-24 VAC / DC.
- Size: 150 x 59 x 36 mm.
- Radio Frequency: 433 MHz.

- Connect up to 4 different Enabler 9R on the same system.
- Two operating modes: dead man and 1-second pulse.
- Normally open contacts available.
- Maximum load: 1 A.
- Not compatible with 230VAC loads.

Compatible with switch.
