

SHX Rack Dual Display

BJ-EX02-2P, BJ-EX02-I2P

The most immersive system for a sensory room is now dual display

The **SHX Rack** is everything you need for enjoying the SHX System inside your sensory room and thus, being able to create **your own thematic environments** within the room.

The SHX System opens up a whole new world of possibilities in **multi sensory environments**, since it allows the user to **interact with the room** and create any combination of surrounding effects such as: **lighting**, **images**, **videos**, **sounds**, **vibration** (4 elements), **music**, effects on the **bubble tube**, **fiber** optics, as well as other enveloping effects that will make the experience **really immersive**. You can trigger the different effects as you like, either individually or by combining a group of actions at the same time, according to what you want to convey; and even create your own contents by using your own videos and pictures. The SHX allows you to display in the room virtually anything you have in mind.

Besides the PC, the software and all the multimedia elements, this product also **includes the tablet** with which you can activate all the effects of the room, and also the contents added by you.

The choices are endless...

A video of a motorbike while we feel the vibration of its engine; a picture of an animal while we hear its name and its sound and feel its vibration; a projection of an idyllic beach in a blue-colored environment while we **feel the sea-breeze**; diving under the sea, etc. You can virtually display anything you have in mind.

There are no limits! Install the SHX rack and fill the room up with light and inspiration!

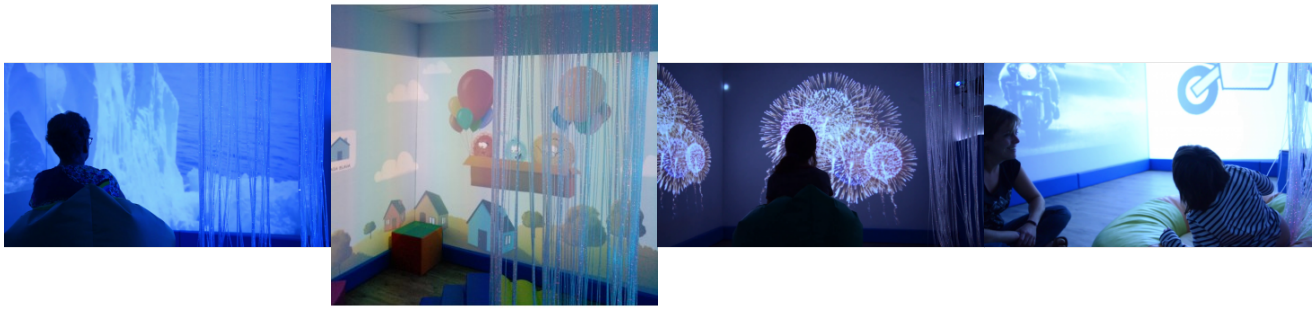

Get even more immersion with the dual display...

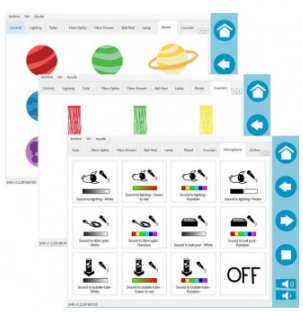

The device is prepared to support **2 projections** in the room; and the double screen makes the experience **even more immersive.** The 2 screens can be placed **in a corner position**, or **one beside the other** to get a **bigger screen**.

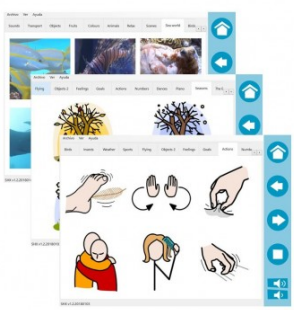

By installing **two screens** in the sensory room, you can have, for example, two different contents, one on each screen, being played at the same time; or have the same content in a continuous way for a **greater surrounding sensation**. The SHX System with double projection comes with multiple configuration possibilities so you can do virtually anything.
