

SHX Compact - no projection

BJ-EX04-SP , BJ-EX04-SP-I
Customized welfare and leisure

SHX Compact is the heart of all MyRoom! environments.

For many people understanding how a TV works, knowing the channels, times, choosing their favourite programmes or films is too complicated. However, their family can adapt their favourite videos and make them accessible with simple icons and multiple access systems.

To do this they have the SHX System. A technology developed by BJLive! alongside professionals specializing in special educational needs, occupational therapists, psychologists and developers with expertise in usability and interaction.

This system allows all the elements in the bedroom to work in coordination to create comprehensive stimulation environments.

The presence of a single control system (SXH system) **allows the integration of all the interactive and multimedia elements**.

This means it is possible to create themed environments or specific adapted learning or leisure activities. Offering infinite interaction possibilities according to each user's needs and tastes.

In addition, **all devices**, from sound and video players to bubble tubes, mirror balls and lights, **can be activated and controlled simultaneously from a tablet**, a simplified button panel and even with the eyes.

This SHX Compact comes with no projector and it is available for Android (BJ-EX04-SP) as well as d IOS (BJ-EX04-SP-I).

Includes the following items:

- SHX Multimedia server computer
- SHX Control Device. A device that integrates the electronic control of all the items in the room with more than 150

scenes installed. A possibility of creating an unlimited number of new, personalized scenes.

- SHX Control Software and contents installed
- Up to 20 DMX channels
- Android SHX Tablet
- Active speakers
- DMX wires
- Available for Android: BJ-EX04-SP or iPad: BJ-EX04-SP-I
