Push the button and dive into a new world

Control all lighting devices

Now with just one button you can **control all devices in a sensory environment**, may that be Luminea devices, or devices within an SHX room in an easy way and with **no need of an additional receiver**. You can control them **either individually** or some **in a coordinate way/simultaneosuly**, and **play different functions**. This product is an improvement with regards to the previous single switch.

Therapeutic Opportunities

Let the user take over and pick his favorite switch to interact with the room. He will be the leader of the session and that will affect positively in the therapeutic intervention. It boosts interaction, playing, communication, learning and entertaining.

Configuration

This switch is wireless, which allows a cable free environment and very easy to configure. On the back side, it has a display to choose the device you want to control and the mode you want to play (color change, sequential mode, scan mode, random, or ON and OFF). Its batteries are long-lasting allowing to push 100.000 times before they need to be changed.

Improvements in this product:

- Wireless: No need of an additional receiver (works directly via Radio-Frequency) with all Luminea devices and SHX Device.
- Long-lasting batteries, allowing to push press 100.000 times.
- Many functions: you can choose color change, sequential mode, scan mode, random, or ON and OFF.
- Choose function: It has a display to choose the device and the function.
- Control all devices at the same time coordinately or in a single way.
- Works with all devices: Luminea and SHX.
