AirSwitch

BJ-136

Connect up to two switches to your computer, Smartphone or tablet via Bluetooth

AirSwitch is a **wireless adapter** that allows you to **connect one or two switches to any device with Bluetooth** (such as a computer, mobile or tablet) and use it thanks to the scanning access.

Easily pair it with your mobile, tablet or computer, just like any other Bluetooth device and it will be ready to use in a few seconds.

AirSwitch allows you to have access to the entire operating system of any computer, mobile or tablet using the scanning option. **Access all your apps with 1 or 2 switches**: **Netflix**, **HBO**, **WhatsApp**, **YouTube**... including **Environmental Control programs**.

You can also use it to **communicate if you have Grid 3, Communicator 5,** or other similar communication software, both to access by scanning and to make the selection of cells directly.

Benefits of AirSwitch

- **Wireless** (unlike the previous BJ-805 adapter).
- **Communicate**: You can use it with the program Grid3 or Communicator 5 and use it to communicate.
- **Full access** to IOS and Android.
- **Alternative to 'dwell click'** if you use an eye-tracking system.
- **Simple use**, like any device that works with Bluetooth.
- **Bluetooth Low Energy**: long battery life for the AirSwitch and the connected device.

Access your device and communicate with two switches!

- 2 3.5mm female jack inputs
- Size: 75 x 35 x 12mm
- Battery type: CR2032
- Bluetooth Low Energy v4.2
- Range: 10m
- Operating voltage: 3V
- Compatible operating systems: Windows, Linux, Android, MacOS, iOS
- Switch compatible
- The computer recognizes the AirSwitch adapter as a keyboard
- For use with old mobiles that do not incorporate scanning access, simply download the Mouse4 All App.
