Luminea Remote

Play with light elements in a room from Grid 3 or Communicator 5

Luminea Remote is a software that allows the users to **control Luminea light elements** in a multi-sensory room using **CAA Grid 3** and **Communicator 5** applications.

This software allows the users of a sensory room to play with the light devices from their own augmentative communication program, and therefore allows them to interact with the room by **using their own access method.**

In addition, to get the most out of Luminea Remote, our CAA and support technology experts have designed a **grid pack you can download** and use with Grid 3.

These grids offer **fun activities** that **encourage interaction** and communicative intentions, allow you to work with the access method (such as looking, for example), and turn therapeutic intervention into a much more playful and entertaining game.

The activities included in these grids have been created to be used with all the Luminea light elements: the bubble tube, the fibre optics, the ball pools, the Luminea planet, the carpet, the lamp, or any of our Luminea light devices.

The Luminea Remote program also allows you to **create your own unlimited activities** and games and always customize it according to your therapeutic and educational goals. **And it's free!**

Therapeutic opportunities

- Allows more options on how to access elements in a room, thanks to the control from the AAC software.
- Everything is integrated: communicator, environment

control
- Allows you to create unlimited new activities for therapeutic interventions
- Allows you to work with precision in terms of ways of access.
- Includes 8 activities you can do with your users or students.

How to get Luminea Remote?

You can easily download the Luminea Remote program and use it as you would to edit any grid of Grid 3 or any of the Communicator 5 pages.

- Download the [Luminea Remote program](#) for free.

- Download [Grid 3 Grid Pack](#) - Luminea Remote for free. This grid pack has been designed by our experts and includes pre-configured activities to be able to interact with Luminea devices.

- Open the [manual](#) and discover everything you need to know to start using Luminea Remote.

Free Design project!

You imagine and we create! Ask us for a free design project for a sensory room that adapts to your needs, available space and therapeutic goals. Send us your contact data and one of our specialists will contact you to design a complimentary design project for you.
