

Vibroacoustic Platform

BJ-EMPL-V

The Vibroacoustic Platform is designed to transform any psychomotor therapy equipment into a vibroacoustic element. By combining sound and vibration, it provides therapeutic benefits that promote relaxation, sensory integration, and physical and emotional well-being.

Enhance therapy with vibroacoustic technology

Place any psychomotor equipment on the vibroacoustic platform and transform it into a vibroacoustic experience.

Designed to integrate sound and vibration into therapeutic, educational, and wellbeing environments.

This multisensory combination stimulates the user's proprioceptive and tactile systems, promoting emotional regulation, stress reduction, improved muscle tone, and overall wellbeing. It is particularly beneficial for individuals with sensory processing differences, self-regulation difficulties, anxiety, or additional support needs.

The platform is made from durable, high-quality materials, ensuring long-lasting use without compromising comfort. Its flat, flexible design allows it to be easily placed beneath a wide range of equipment, with no permanent installation or complex setup required.

As part of a multisensory environment, this technology becomes a versatile and effective tool for guided relaxation, sensory integration, and music-based stimulation, adapting to users of different ages, abilities, and therapeutic goals.
